HEALTH INFORMATION MANAGEMENT
CONCENTRATION

Health Information Management is a combination of medicine, management, finance, information technology and law. Graduates of this program could choose to work in a variety of healthcare settings. Health Information Management professionals are trained in the latest information management technology applications and understand the workflow process. Duties could include operating computer information systems, coding diagnoses and procedures for reimbursement, maintaining quality control of health records, and more in accordance with strict state and federal laws.

The Health Information Manager is a vital member of the healthcare team and is responsible for managing these systems where the expanding arena of healthcare meets the cutting edge of technology. They are vital to the daily operation of health information and electronic health records.

At ECPI University's College of Health Science, you could earn your Associate of Applied Science Degree - Health Information Management in as little as 1.5 years through ECPI University's year-round program.

1 YEAR	1.5	2 YEARS
DIPLOMA	ASSOCIATE OF APPLIED SCIENCE DEGREE

Outcomes

ECPI University's Health Information Management Program could prepare you to:

▸ Demonstrate proficiency in health data management, information policy, information systems, administration and clinical work flow.

▸ Demonstrate skills necessary to operations management that will ensure an adequate and complete medical record and cost effective information processing.

▸ Function as a bridge between clinicians, payers, regulators, patients, consumers, and technology.

▸ Ensure the availability of accurate health data through the application of current and future healthcare technologies including the electronic medical record, electronic health records, integration of healthcare technologies within healthcare systems, and wireless and internet applications.

▸ Function as part of a team that includes not only health information management technicians, but also clinicians and customers, in a variety of settings.

▸ Perform in the role of health information management technician by applying skills, values, and knowledge from the coursework to professional practice experiences.

▸ Demonstrate skills that are critical to adherence and promotion of continuous quality improvement, regulatory requirements, and the revenue cycle processes.

▸ Distinguish the legal and ethical standards of practice for health information management, including HIPAA, in a variety of health care settings and situations.
